EDUCATION

University of Michigan in Ann Arbor

GPA: 3.72/4.0

B.S in Computer Science (May 2027)

Relevant Coursework: Data Structures & Algorithms, Intro to Computer Organization, Practical Data Science, Linear Algebra, Multivariable Calculus, Computer Vision, Embedded Systems, Virtual Reality with AI, Machine Learning, Autonomous Robotics with Design Experience, Computer Graphics & Generative Models

EXPERIENCES

Atombot Swarm Robotics Researcher, Extreme Robotics Lab

January 2025 – Present

- Co-leading a 5 member task team, developing a multi-camera AprilTag motion capture system to estimate Cookiebot poses for repeatable swarm experiments.
- Building a fast, agile, obstacle-climbing wheel-legged quadruped with a real-time sensor-fusion stack on NVIDIA Jetson (Ubuntu 20.04) + ROS2 Foxy under Prof. Y Z as part of the Multidisciplinary Program.
- Developed and validated a RealSense tracking pipeline by constructing an AprilTag ground-truth grid and benchmarking pose accuracy using mean absolute error (MAE).
- Engaged with the simulations team, learning and leveraging ROS2 and Gazebo to develop simulation frameworks for autonomous navigation and obstacle detection for wheeled quadruped robot development.

League of Legends Match Outcome Predictor (EECS 398 Practical Data Science)

March 2025 - April 2025

- Engineered and trained a logistic regression model to predict match outcomes using 25-minute in-game stats, achieving 83.6% test accuracy and 0.92 ROC-AUC.
- Performed feature engineering on gold, XP, and kill differential across 10K+ match logs; implemented visualization via Plotly and published results using Jekyll.
- Demonstrated end-to-end ML workflow from data preprocessing to model evaluation and deployment-ready insights.

Fellow, Data Science and Machine Learning at MIT IDSS (12 Week Online Program)

May 2024 - Sep 2024

- Developed an Amazon product recommendation system using matrix factorization and similarity-based methods.
- Predicted customer conversion with decision trees and random forests, enhanced by hyperparameter tuning.
- Conducted EDA for FoodHub, delivering insights into restaurant demand to drive business decisions.
- First Place Winner, MIT IDSS DSML Hackathon (Sep 06–09, 2024): Collaborated in a 2-member team to develop a predictive model determining passenger satisfaction for the Shinkansen Bullet Train, achieving an accuracy rate of 95.86%

Research Assistant, Dynamic Project Management (DPM) Laboratory

Nov 2022 - 2023

- Research assistant for a Post-Doctoral Research Fellow and PhD student working in DPM Lab under the guidance of Dr. SangHyun Lee (U-M Civil & Environmental Engineering Dept)
- Labeled large-scale training datasets for machine learning algorithm from the videos collected from construction sites into different classes, like fall-related risk or not, timestamp of strides, EDA signals, and IMU signals
- Researched on wearable based fatigue monitoring for construction workers and disadvantaged individuals, have weekly meetings and reports to the research team to communicate and provide assistance for sponsor reports

User Experience Researcher, U-M Digital Water Lab

Dec 2021 - 2022

- Researched for the Open Storm User Experience with Environmental Sensing & Data project, part of University of Michigan's FEAST (faculty engineering/arts student teams) initiative under the guidance of Dr. Branko Kerkez
- Developed and created a data analytics dashboard for the HRWC (Huron River Watershed Council) and Clinton River Water using Python, Plotly Dash, Grafana, and Figma.
- Utilized, managed, deployed real time environmental sensors to measure and report data from water systems to create scalable solutions for problems Michigan communities have with flooding, water quality impairments, and algal blooms

Business Analyst, BluExcel Consulting Group

May 2021 - 2022

- Conducted market research and presented the deliverable to the Michigan Dining senior leadership team
- Analyzed 10,000+ transactions at Michigan Dining and formed a thorough understanding of TAM (i.e., total addressable market) size and SOM (i.e. serviceable obtainable market)
- Identified and provided actionable solutions for growth strategies, such as acquiring more labor in the post-pandemic era, and feasible solutions for supply chain issues (i.e., supply shortage)

PUBLICATION

Liminal Training: Characterizing and Mitigating Subliminal Learning in Large Language Models — (NeurIPS 2025) Workshop on Socially Responsible and Trustworthy Foundation Models (ResponsibleFM), 2025.
